

CCCORP

Techsolutions Private Limited

Digital systems.
Intelligent operations.

Technology solutions for government and enterprise

cccorptechsolutions.com

CCCORP at a glance

Software development and IT services for complex operating environments.

We build digital platforms that help organizations manage work, use information and support day-to-day operations.

Our scope spans solution design, application engineering, data and AI, enterprise integration and ongoing support.

People and delivery accountability

Technical expertise combined with management perspective and operational experience.

Engineering depth

IIT graduates and engineering professionals contribute to software architecture, AI and complex system integration.

Management perspective

IIM graduates bring programme management and business thinking to technology decisions.

Industry experience

Experienced professionals work through real workflows, integration constraints and implementation priorities.

Security expertise

An in-house security team and certified security auditors support assessment, evidence review and remediation.

Services across the technology lifecycle

Product strategy

Discovery, requirements and solution architecture.

Web & mobile engineering

User experience, applications, APIs and testing.

Cloud modernization

Migration, integration, DevOps and legacy renewal.

Data analytics

Data preparation, KPI design and diagnostic analysis.

Business intelligence

Governed metrics, dashboards and management reports.

Machine learning

Data readiness, model evaluation and monitoring.

AI & automation

Knowledge assistants, document intelligence and review.

Cybersecurity & compliance

Secure design, assessment and remediation support.

Managed application support

Issue resolution, enhancements and release coordination.

Products for connected operations

Software for administration, mobile access, operational oversight and credit risk.

Smart Governance

Citizen services and programme oversight

EWS & Red-Flagging

Signals, alert review and evidence

Enterprise ERP

Finance, procurement and inventory

CCTV Monitoring

Multi-site visibility and incident review

E-Filing

Document routing, approvals and records

Credit & NPA Management

Portfolio follow-up and recovery cases

Mobile App Development

Android, iOS and enterprise APIs

AI Intelligence & Automation

Knowledge and document workflows

Digital governance and paperless offices

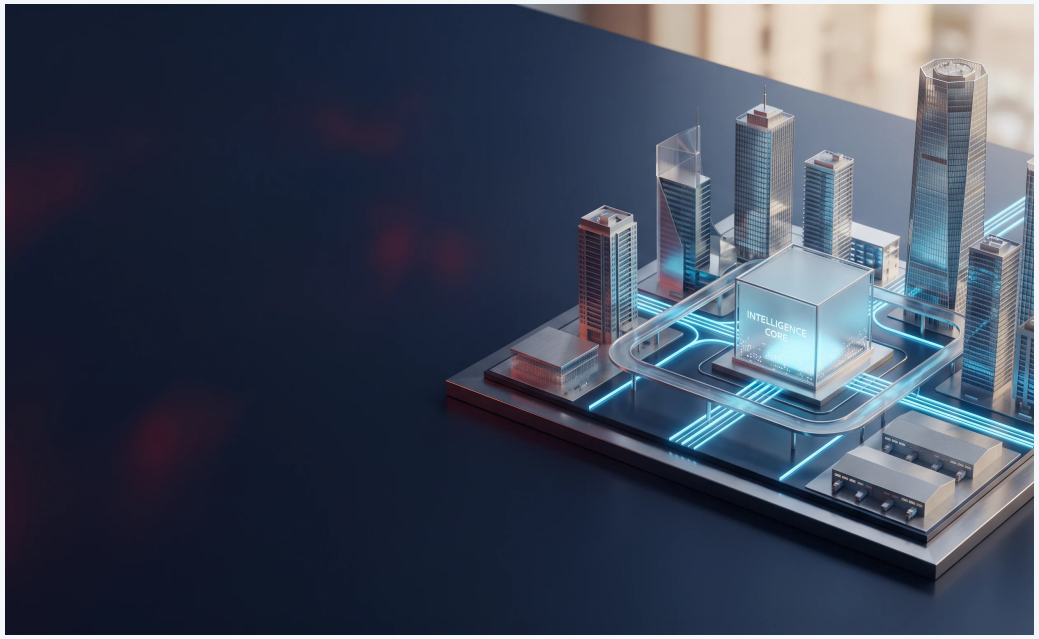
Smart Governance and E-Filing support a traceable service and approval process.

Smart Governance

Citizen services, grievance management, departmental workflows, district dashboards and GIS views.

E-Filing & Document Management

Document indexing, controlled routing, approvals, version history and digital-signature integration.



Banking risk and recovery workflows

Early-warning review and follow-up across a bank’s portfolio.

EWS & Red-Flagging

Combine approved financial, behavioural and operational indicators. Apply configured rules and route alerts for investigation.

Credit Monitoring & NPA Management

Track review cases, assign follow-up, record recovery actions and retain an auditable history.

Signals / Rules / Review / Action / Oversight

Human review, documented evidence and escalation remain central to every decision.

Enterprise ERP

A shared operational record across business functions.

Finance, procurement and inventory working from consistent master data.

What teams can manage

Requisitions and approvals, purchasing, stock movements, operational records and management reporting.

Mobile apps and operational visibility

Mobile applications and CCTV Monitoring connect distributed operations.

Mobile App Development

Build Android and iOS apps with clear user journeys, secure APIs, offline workflows and release support.

CCTV Monitoring & Command Centre

Group camera feeds by site, monitor device availability and document incident review and escalation.

Services for customers and field teams

Agree supported devices, privacy controls and integration scope. Test mobile journeys and operational workflows before release.

AI, analytics and decision support

Approved information, useful analysis and accountable human review.

AI Intelligence & Automation

Search enterprise knowledge, extract document fields and prepare workflow actions for staff approval.

Analytics, BI and machine learning

Build governed KPIs and dashboards, evaluate forecasts and identify patterns that need closer review.

Secure foundations for enterprise systems

Security and operating responsibilities form part of solution design.

Identity and access

Biometric identity, eKYC integration and role-based access appropriate to the application.

Application and data security

Security reviews, access-control testing and remediation aligned with the implementation scope.

Infrastructure integration

Procurement, deployment and integration of the IT infrastructure needed to support the solution.

Operational continuity

Monitoring, incident response, release coordination, documentation and managed support.

Industries we serve

Government & public services

Portals, service workflows and programme dashboards.

Education & skill development

Mobile learner services, centre operations and reporting.

Retail & commerce

Applications, inventory and business intelligence.

Manufacturing & industrial

Workforce, safety and operations visibility.

Banking & financial services

EWS, portfolio oversight and recovery workflows.

Healthcare & wellness

Administrative workflows and workforce reporting.

Logistics & warehousing

Warehouse processes and exception management.

Enterprise services

Custom software, cloud and managed support.

Delivery approach

Clear scope, visible progress and shared ownership throughout the engagement.

Discover	Workflows, current systems, users and success criteria.
Design	Journeys, prototypes, architecture and delivery roadmap.
Build	Working increments, integration and test evidence.
Launch	User acceptance, migration, training and handover.
Evolve	Support reviews, feedback and agreed enhancements.

Why CCCORP

One delivery team connects the application, information and operating environment.

Engineering with operational context

We connect product thinking with implementation, then support the solution as requirements evolve.

Lifecycle ownership

Discovery through release, handover and support.

Governance and traceability

Approval flows, evidence and clear responsibilities.

Connected capabilities

Software, AI, identity and infrastructure integration.

Security within delivery

Review and remediation alongside engineering.

Government and institutional clients

Selected relationships in our client portfolio.

Ministry of Defence
Government of India

DPIIT
Government of India

Government of
Uttar Pradesh
